## **WARM** in the winter **COOL** in the summer

Cavity wall insulation acts like a blanket that stops heat escaping. It retains the **heat** and releases it back into the internal space. The insulation also keeps the home **cool** in summer by reflecting the unwanted external heat out, so the property maintains a comfortable indoor temperature and doesn't overheat.

Cavity Wall Insulation acts as a barrier to prevent heat passing through your wall cavity in Both directions, keeping your home warmer in the winter and cooler in the summer.

Up to 35% of your heating can be lost through your un-insulated cavity walls costing you up to £250 per year

## **WARM** in the winter **COOL** in the summer

1.

### Cost

Saves money and our Nation's limited energy source

2.

### Comfort

Makes your house more comfortable by helping to maintain a uniform temperature

3.

### Temperature

Makes walls, ceilings and floors warmer in winter and cooler in summer
